DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claims 1-4, 17-20 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-19 of U.S. Patent No. 6,158,341. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the claimed invention is met by the claims of U.S. Patent No. 6,158,341.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application

Art Unit: 2854

published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

3. Claims 1-7 and 17-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Holmberg (US 6,158,341).

Holmberg teaches a method of tamp printing of at least one picture using at least one tamp pad 5 comprising a rotating tamp pad (Fig. 13) rotating around a shaft 31 and printing on a piece 4 having a plurality of boundary surfaces forming angles in relation to one another, the rotating tamp pad having at least one intermediate notch (space between the pads 5) and a plurality of tamp pad portions 5 (Fig. 13), the method comprising the steps of printing in a first direction (Fig. 1) against a first boundary surface of said plurality of boundary surfaces by applying ink from an ink container to at least one rotating printing block 19 being in rotating contact with the tamp pad, thereby transferring the at least one picture to the plurality of tamp pad portions, transferring said at least one picture from the plurality of tamp pad portions to a plurality of pieces (Fig. 13), the step of printing in the first direction causing compression of the at least one tamp pad against said first boundary surface, the compression causing the tamp pad to deform and printing in a second direction against a second boundary surface of the plurality of boundary surfaces, wherein said tamp pad portions print said picture on an inside surface (Fig. 13) of the pieces passing on a conveyor belt 37, the pieces comprising a mobile telephone cover 4, said boundary surfaces comprising inside surfaces of said mobile telephone cover, and said picture comprising an electrically conductive layer (Abs.).

Response to Arguments

4. Applicant's arguments with respect to claims 1-7 and 17-29 have been considered but are moot in view of the new ground(s) of rejection. US Patent 6,158,341 anticipates claims 1-7 and 17-29 under 35 U.S.C. 102(e).

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin D. Williams whose telephone number is (703) 305-3036. The examiner can normally be reached on Monday - Friday, 8:30am - 6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Hirshfeld can be reached on (703) 305-6619. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 746-4399 for regular communications and (703) 308-7722 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
